No clinic is complete without the introduction of Energy Medicine as a Potent Healing Tool.

An international natural health college course module that has redefined practitioner treatment within contemporary natural health clinics

Rarely does the opportunity present to redefine the way natural health practitioners and specialists approach the healing process.

Energy medicine is at the forefront of creating a whole new world of treatment options and outcomes for today's contemporary practitioner.

The Australian Bush Flower Essence College Course explores and teaches a new paradigm of treatment options based on subtle energy systems, creating new opportunities for "healing in the whole person".

So often practitioners struggle to treat the silent and unseen causal issues of today's dis-ease and are left to merely treat presenting symptoms.

Societal, environmental, psychological and physiological change have created consistent evolutionary challenges for today's practitioners to find more potent and relevant treatment options that embrace the plethora of imbalances that present in today's modern clinic.

Within this accessible course, you will learn to assess and treat an extraordinary cross section of presenting causal issues with ongoing supportive strategies.

If you intend on studying anything this year, choose this course!

It will liberate a compelling array of new treatment options for today's practitioner, no matter what your specialisation.

This is a "must do" opportunity!!
